Evaluation

The following features are explained in **Gang of Four** .

1. The design pattern allows the transparent extension of the functions of an object at runtime.

2. The design pattern should be for functions that do not use every object of a class needs to be applied.

3. The design pattern helps if a static inheritance as a feature extension a class is not practical. This feature will also be textual in the part Consequences detected.

The following features are graphically displayed in the Structure part.
